Adobe® Reader® 6.0

Viewing Adobe PDF documents in a Web browser (Windows)

Adobe Reader installs plug-ins that make viewing Adobe PDF documents on the Web easy. You can view PDF documents in your browser, or you can set up Adobe Reader to work as a helper application so that when you open or download PDF documents from the Web they open in a separate Adobe Reader window.

You can view the PDF document in the Web browser if you are using Internet Explorer 5.0 or later, Netscape Navigator 7.0 or later, or America Online 6.0 or later. Because keyboard commands may be mapped to the Web browser, some Adobe Reader shortcuts may not be available. Similarly, you may need to use the tools and commands in the Adobe Reader toolbar rather than the browser toolbar or menu bar. For example, to print a PDF document, you need to use the Print button in the Adobe Reader toolbar rather than the File > Print command in the browser. (In Internet Explorer, you can use the File > Print, Edit > Copy, and Edit > Find commands on the Internet Explorer toolbar.)

Note: Netscape Navigator 6.0 is not compatible with Adobe Reader's Web browser plug-in and does not support viewing PDF documents in the browser.

You can set your preferences to launch Adobe Reader as a separate application outside your browser and automatically open linked PDF documents in Adobe Reader. In this mode you cannot use Fast Web Viewing, form submittal in a browser, or search highlighting on the Web.

To use Adobe Reader as a helper application:

1. Choose Edit > Preference, and select Internet. (You can also choose Preferences from the document pane menu.)
2. Deselect Display PDF in Browser, and click OK.

To set browser and Internet preferences:

Choose Edit > Preferences, and select Internet in the left pane. (You can also choose Preferences from the document pane menu.) Set the following options and then click OK.

Display PDF in Browser (Windows only)

Displays any PDF document opened from the Web inside the browser window. If this option is not selected, PDF documents open in a separate Adobe Reader window.

Check Browser Settings When Starting Reader

Checks your default browser settings for compatibility with the application each time the application is launched.

Allow Fast Web View

Downloads PDF documents for viewing on the Web one page at a time. If this option is not selected, the entire PDF file downloads before it is displayed. If you want the entire PDF document to continue downloading in the background while you view the first page of requested information, also select Allow Speculative Downloading in the Background.

Allow Speculative Downloading in the Background

Allows a PDF document to continue downloading from the Web, even after the first requested page displays. Downloading in the background stops when any other task, such as paging through the document, is initiated in Acrobat.

Connection Speed

Choose a connection speed from the menu. This setting is also used by the multimedia plug in.

Internet Settings

Click to set up your Internet connection. Follow the prompts, or consult your ISP provider if you need help.
